EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

in claim 10, line 4, delete "receiver" and insert --transceiver--.

2. The amendment is made to correct an indefiniteness/antecedent basis resulting from the language "transmission of the receiver" since a receiver does not provide a transmission, rather the transceiver provides a transmission, and, more specifically, the transmitter of the transceiver provides the transmission. Moreover, the only "receiver" defined is the GPS receiver and it is clear that the GPS receiver does not provide the first transmission. Accordingly, the language "receiver" is substituted with the correct terminology "transceiver".

3. The following prior art is considered pertinent to the applicants' disclosure. Choi et al (US 2003/0122706) is directed to an integrated GPS and cellular/PCS device wherein a common antenna is shared as well as further common components including processors. Naruse et al (6,466,163) disclose an integrated GPS receiver and communication receiver wherein crosstalk interference is reduced by controlling timing of respective demodulators and thus does not show the replicated transmission signal. Parmentier (6,442,375) discloses a co-located GPS receiver and cellular transceiver wherein cross talk is minimized by monitoring a signal generated by the transmitter of the transceiver so as to generate a control signal that identifies or corresponds to the intervals during which the transmitter is active and subsequently may control the gain control of the GPS receiver circuit.
